Introducing the Latest Technology  
in Toenail Reconstruction

# Nanoflex

BY FUZION

*Flexible hard gel specifically formulated for toenails*  
*Contains NanoSilver - a natural anti-fungal & anti-bacterial*  
*Self Leveling - very easy to use*  
*Cures in 30 seconds LED or 120 for UV*

*The NanoFlex Pro Kit comes with everything to get started:  
15g sheer pink, conceal pink and conceal natural gel,  
15ml Bonder, 250ml Cleaner, 2-piece sculptor brush,  
UV/LED portable lamp and step by step instructions  
and enough product for over 60 reconstructions!*

## NanoFlex Step by Step Application

1. Prep natural nail:
  - a. Reduce nail thickness using a nail reducer bit and trim any lifted nail plate.
  - b. Wipe nail plate thoroughly with Fuzion Cleanzer.
  - c. Apply one coat of NanoFlex Bonder to the entire nail, cure 30 seconds LED, 120 seconds UV.
  - d. NOTE- it is recommended to use a disposable brush or lip wand when applying Bonder to avoid cross contamination.
  - e. Scoop out a small amount of NanoFlex and place it on a tile to use during service (dispose any leftover gel that's not used)
2. Apply an even coat of NanoFlex to the natural nail ensuring no cuticle contact. Cure 30 seconds LED, 120 seconds UV.
3. Apply a second coat of NanoFlex to build a nail and create a free edge. Even out any low spots. Ensure you are reconstructing the toenail with enough gel for filing and shaping. A third coat can be applied. Cure 30 seconds LED, 120 seconds UV after every application of gel.
4. Wipe nail plate with Fuzion Cleanzer. Shape perimeter with a disposable file or a metal file. Shape and buff as required.
5. Cleanse the nail plate and polish.
6. Ensure client returns in 3-4 weeks for an evaluation of nail and retouch. Explain the importance of home care and using Footlogix Tincture.
